Sheriff,

I have not heard of or read any hard projections for the near future in our area.

Based on what we have seen over the last few months, I expect that we will see more prescription medication abusers transitioning to Heroin, because the high is much cheaper. It is certain segments of the heroin user group who are eventually getting the fentanyl related products (unaware of the potency) and overdosing. The profit margin for selling fentanyl and fentanyl related analogs is very high, so it seems likely that as more people discover how to access these products from China, we will continue to see it more frequently in our community. I anticipate we will have both more overdoses, and more non-fatal fentanyl overdoses thanks to Narcan being administered to victims. The Medical Examiner's office told me they expect to see an increase in opiate related overdose deaths in the future.

Respectfully,

-Floyd

Sheriff,

This is a summary of overdose data from the Tarrant County Medical Examiner's Office for 2015 and 2016.

The TCME data shows overdose deaths (opiate and non-opiate related) in Tarrant County (accidental and intentional) increased from 195 in 2015 to 262 in 2016, **an increase of 34%**.

In 2015 there were 141 Drug Overdose deaths caused by or related to Opioid use. Sixty-six deaths, (47%) were related to Heroin use.

In 2016 there were 173 Drug Overdose deaths caused by or related to Opioid use, **a 22.7% increase**. Sixty-two deaths, (35.5%) were related to Heroin use.

In 2016, 11 deaths were related to U47700, the fentanyl analog - 2016 is when the TCME began testing for the U47700 analog.

If you need further information, please let me know.

Respectfully,

*LIEUTENANT FLOYD HECKMAN #3475*
